# "You should evaluate your automation investment as if your future depended on it."

Every day someone comes out with a new way to do this or a better way to do that. And the pace is getting faster all the time.

Libraries are no exception. When you automate, you have to be sure the system you buy today will be able to take advantage of all the innovations that will spring up tomorrow.

## The changing environment.

Much of the change now focuses on or around the rapid exchange of information. Electronic mail, networking, gateways, data and video communications—all these are virtually waiting on your doorstep.

Software changes, too. Newer and better applications packages are constantly emerging—some to augment what you already have, some to replace them. One of the most exciting new develop-

ments involves relational data base management systems software. This sophisticated tool gives you freer, faster and more definitive access to your data base, with more effective and flexible manage-

ment reports, collection development tools, and system security codes.

You'll be able to capitalize on hardware breakthroughs as they happen, too. So you can take advantage of the computer industry's rapid trend toward increased computing power at reduced cost.

## Staying open to change.

Your library system needs to accommodate changes like these. Open systems provide the easiest way to do just that. They let you adapt to change economically and at your own speed.

So it pays to choose a vendor who continually examines and evaluates advances in technology. Who understands the usefulness of this technology and how to apply it in a way that's useful to you. And who has a history of providing flexible solutions for the complex, ever-changing world of library automation.

Find out more about what these innovations can mean to you. Write for our free Q & A booklet: CLSI, Inc., 320 Nevada Street, Newtonville, MA 02160, or call us at 1-800-365-0085.
